Dear Mr. Snow, 0063

I understand that you are the Executive Director for the CalFed program. As such, I would like to tell you that I am fed up with the alterations & destruction to the natural habitats in California. We are slowly leaving a legacy of death & destruction for the world that comes after us. Whole species are being destroyed.

I urge you to take the course of NO impact to existing wild habitats and restoration of what can be restored. From here on out CONSERVATION of water MUST be the name of the game, not alterations, not damming, not levee's. Dams need to be removed, flows of water need to be re-established. We need to save others in order to save our own kind.
