Calfed Bay-Delta Program
Attention Mr. Rick Breitenbach

As a member of the California Trout organization I wish to go on record, that increased use of groundwater storage instead of new dams or above ground reservoirs as noted in phase 2 is I feel the better alternative

I would like to see the State increase conversation awareness to both the agricultural and local comunities. Both in the drout years as well as the years when the rain and snow fall are more abundent.

The Bay-Delta water quality and quanity are very important to the ecology of the Central part of our state

Sincerely; Russell Walter
