Dear Mr. Snow:

As a school teacher I'm extremely concerned about the future of California's water program and so urge you to maximize your efforts towards helping our water situation at its source - for both quantity and quality of water available. Conservation is at the heart of future planning and I only hope the CALFED Bay/Delta program - with your help, will do it successfully. Especially:

1) MAXIMIZE the enforcement of pollution limits - good for wildlife as well as people

2) BAN all new dams and reservoirs for at least seven (7) years. No more studies, either.

3) RESTORE our fisheries, bays and rivers by providing adequate fresh water and care for the land around our rivers.

4) WORK for the full funding of all state agencies that work to CONSERVE groundwater, aquifers, etc.

Thank you very much, and your efforts will be appreciated in the future by all the children of this state. Sincerely,

Al White
