CalFed Bay-Delta Program
State Clearinghouse #96032083
To Whom It May Concern:

I support human activities that protect & restore our planet's natural resources. It is my understanding that you are currently proposing to build more costly dams, canals & reservoirs. According to Clean Water Action your proposals pose serious environmental impacts on S.F. Bay Delta water quality.

It is proven that dams especially destroy habitats for many species, as well as degrade the environment surrounding the places where rivers used to be.

Please see that your actions cause more water to flow thru the Bay/Delta to restore habitat & the environment. Please stop the building/expansion of dams, canals, & reservoirs which use up taxpayer funds & can negatively alter natural resources.

Please seek to use sustainable development & agricultural

1024(2)

practices with California's current water sources.

I urge you not to build the first third of a canal around the Delta which will take away even more water from an already depleted river/delta habitat.

Your efforts on behalf of clean water for all will be appreciated & rewarded by generations to come.

Consider the future health & wealth of all creatures.

Thank you!
