Dear Sirs: SEP 2 2 1999 9/20/99 1112

As a farmer, I am writing to urge a balance for the environmental and people/farming needs in CALFED's final recommendations. My highest priority is for conservation and more efficient use of water. Please no more dams with the accompanying reservoirs and canals. Rep: water quality is imperative both for the flora and fauna in nature as well as for people. Existing regulations as well as those written in the future must be directed toward elimination of toxics & pollution at the source as well as fostering improved methods of removing pollutants. Rules must be rigorously enforced.

Sincerely, Carolyn H. Penders
